

EVA

Emergency backpack

EVA is a piece of art made by the artist Spencer, whose main theme is price. Not a normal price but the most convenient. This piece of art is reproduced and sold by retailers worldwide. This is the reason why it's not expensive.

Made of expanded polyethylene and Lycra, small and non-traumatic, it can be used as a backpack or a bag.

The technology that has been used gives simple shapes with high attention to details and quality of materials:

- very low stress level
- high elasticity and retention of shape, even under high pressure
- flexibility that permits the product to return to normal shape
- optimal resistance to UV and chemical components
- excellent electrostatic characteristics

Inside there are spaces for safe storage of accessories and medical instruments. Born to contain manual resuscitators and masks, now used also for medication and first-aid kits.
