

DOLPHIN

Universal life saving device

The universal life saving device is manufactured in expanded, self skinning, closed cell polyurethane.

It can be flexed to wrap around the casualty in horse shoe shape. Along with its flexible shape, the carabineer closure makes it adjustable to casualty of any build. A mouth to mouth flex mask (not included) can be positioned in the purpose made cavity on one end, ready for immediate use once the casualty has been removed from the water.

The new shape of the device make it easier for both the rescuer and the casualty to grip.

TECHNICAL DATA

Dimensions	1200x170x80 mm
Weight	2 kg
Structure material	Self skinning expanded PU
Tapes	Polyester
Colour	Yellow
Latex Free	

DY32400D
