Anti-shrinkage vacuum mattress

Vacuum mattresses are devices for the immobilization of trauma patients. The vacuum system allows different levels of immobilization. The more rigid helps the right positioning of the patient; softer ones allow to mitigate the low-frequency vibrations typically found on emergency vehicles during transport.

Specific characteristics

Robust, non-absorbent and self-extinguishing fabric
Reinforced handles to ensure a safe grab
Embedded inserts in the lower side of the mattress, offer more support to the patient and limit the retraction of the mattress during decompression procedures
