

SHELL

Universal basket stretcher

Spencer Shell basket stretchers are intended for the recovery and transport of patients. They can be used for rescue operations in those cases where it is necessary to protect patients from side impacts, where it is not possible to intervene with normal transport equipment. The devices can be hoisted with lifting systems applied to fixed anchors, in all cases keeping the stretcher in a horizontal position with respect to the ground, and only if equipped with a Spencer harnessing system. It is not foreseen that the patient be able to intervene on the devices.

Specific features

The single shell body makes it extremely safe and easy to handle

The perimetral frame provides rigidity and allows to have a firm grip on the handles

Equipped with rings for hooks fixing

Perimetral rope to fix belts or accessories

The shape of the inferior part reduces friction during ground dragging procedures

Mattress to increase patient comfort

Equipped with straps and rings
